

## Accessibility Statement

The company defined in the imprint (hereinafter referred to as "We", "Our", or "Us") is committed to making its digital services on its website <https://www.bullscorner.at/> (hereinafter referred to as the "Offer") accessible, in accordance with the Barrierefreiheitsgesetz in the current version and Directive (EU) 2019/882 on the accessibility requirements for products and services. The implementation of the accessibility requirements is based on the guideline for accessible web content – WCAG 2.1.

The offer includes the website of the Bulls' Corner Restaurant of Salzburg Sport GmbH, which offers information (e.g. menus) and products (e.g. vouchers) in connection with the restaurant. In addition to purchasing voucher products, the website offers features such as table reservations. The offer is not entirely subject to the scope of the Barrierefreiheitsgesetz

## Non-accessible content

The content listed below, which is subject to accessibility requirements, is currently not or only partially accessible:

- WCAG Success Criterion 1.1.1 Non-Text Content  
Some images and buttons lack alternative texts or the existing alternative texts do not adequately describe the specific image.
- WCAG Success Criterion 1.2.1 Audio-only and Video-only content (Prerecorded)  
Most videos run in a continuous loop and have neither spoken text nor background music. They do not serve to convey information, but have a purely emotional character, so there is no alternative description of the video content.
- WCAG Success Criterion 1.3.1 Info and Relationships  
HTML is used for content formatting on individual pages. In the CMS and its editor, certain elements (e.g. column widths of tables) are formatted using "inline" style information. Where technically feasible, these inline styles have been replaced by corresponding CSS rules (Cascading Style Sheets). There is external content, which is integrated by means of widgets and code.
- WCAG Success Criterion 1.4.3 Contrast (Minimum)  
Individual areas have too little contrast.
- WCAG Success Criterion 1.4.5 Images of a Text  
A banner contains text as part of an image that blurs when magnified, making it difficult for visually impaired users to read.
- WCAG Success Criterion 1.4.11 Non-text Contrast  
Contrast deficiencies occur in certain elements.
- WCAG Success Criterion 1.4.12 Text Spacing  
The website does not allow adjustment of the text spacing, which may affect users with reading disabilities.

- The purchased voucher product can be downloaded as a PDF file. The PDF file itself is not accessible. The voucher product is a purchased solution from the third-party provider INCERT eTourismus GmbH & Co KG, which is currently not (partially) offered barrier-free. Optimizations are being worked on.

### **Creation of Accessibility Statement**

This information on accessibility was prepared on the basis of an internal assessment of the compatibility of the offer with the accessibility requirements conducted in the form of a self-test according to WCAG 2.1. on 26.06.2025.

Our offering is regularly tested and improved to ensure that all content added or edited meets accessibility requirements. If you encounter barriers that hinder or restrict your use and that must be designed in accordance with the applicable accessibility requirements, we kindly ask you to inform us via the following e-mail address: [willkommen@bullscorner.at](mailto:willkommen@bullscorner.at). In this case, please briefly describe the problem and include the URL of the affected web page or document. We will process your message and contact you as soon as possible.
